PROJECTS

Reinforcement Learning Algorithm Comparison — Taxi-v4 and Webots Navigation

GitHub: <https://github.com/Zeiny213/reinforcement-learning-taxi-webots.git>

- Implemented Q-learning, SARSA, and First-Visit Monte Carlo agents from scratch using Python and NumPy.
- Trained and evaluated the agents on Gymnasium Taxi-v4, comparing success rate, reward, steps, and training time.
- Built configurable training and evaluation scripts with YAML-based configuration, telemetry logging, and result visualization.
- Extended the project with an experimental Webots e-puck navigation simulation to connect tabular reinforcement learning with robotics.
- Added unit tests (PyTest) for algorithm update logic, configuration loading, and reproducibility checks.
